

VETERINARY MEDICAL COMPLEX

UC Davis Weill
School of Veterinary Medicine

Small Animal Hospital

Streamlining services, expanding specialty care.

UC Davis is home to one of the best and most advanced veterinary teaching hospitals in the world, where our unmatched care ranges from routine exams to the most complex, lifesaving surgeries. The demand for our services is ever-growing: we see over 15 times more patients every year than our hospital was built to serve, and still we turn many away.

Quite simply, we can no longer fit more animals or more students into our current facility. Our bold vision ensures we will have the capacity to meet this growing demand, while continuing to lead veterinary medicine forward for decades to come. By expanding and integrating our teaching hospital into a larger Small Animal Hospital, we are building a **true veterinary medical complex**—similar to leading human health systems. Within this modern facility, specialty, emergency and critical care will be seamlessly connected, **dramatically increasing capacity, transforming the client experience, and reimagining veterinary education.**

EXPANSION WITH LIMITLESS POTENTIAL

The new Small Animal Hospital:

- Combines clinical, teaching and research spaces in a much larger facility with **ample outdoor access.**
- Extends care to **~50% more patients** across dozens of specialties.
- **Triplies ER/ICU capacity.**
- Will have state-of-the-art technology to unlock new possibilities in personalized medicine.

*Join us in transforming the
future of veterinary medicine.*
